STEPS FOR PREPARING A REPRESENTATIVE GRAIN SAMPLE

Preparing a representative grain sample will help us provide accurate information about the quality of your grain.

1

PRIMARY SAMPLE FROM ONE TRUCKLOAD

Use a sample scoop to take primary samples throughout the bulk of each truckload of grain going into the bin.

2

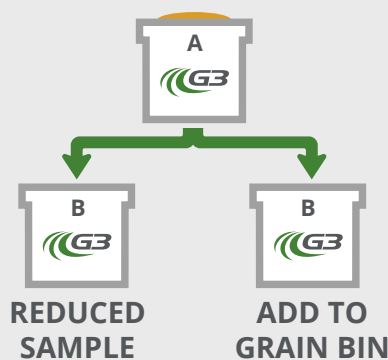

COMPOSITE TRUCK SAMPLE

Combine your primary samples to make a composite sample representing each truckload of grain.

3

COMPOSITE TRUCK SAMPLE

Reduce the composite truck sample by dividing into two containers.

4

REDUCED SAMPLES

COMPOSITE BIN SAMPLE

Combine your reduced samples of all truckloads going into one grain bin.

5

COMPOSITE BIN SAMPLE

Your final composite sample represents the contents of your entire grain bin. Mix your sample well.

6

Reduce and divide your composite grain sample into sealed bags, labelled with the bin that your sample represents.
